Data Analytic Process

Data analytics are processed by Seven steps mainly,

Real time scenarios of data analytics:

1) Buying a car

Plan:

    Decide which model is in trend to buy before going to showroom.

Prepare:

    Check the condition of budget how much I like to spent.

Process:

    Choose the car which I like.

Analyse:

    Check the car conditions whether it is comfortable for me.

Share:

    Communicate with shopkeeper that I am ready to buy.

Act:

    Finally, I buy it.

2) **Draw a picture**

Plan:

    First I decide a picture.

Prepare:

    Check whether I am having the tools to draw a picture.

Process:

    Start drawing.

Analyse:

    Checking the angles and view whether I am doing good.

Share:

    Share with my friends and family.

Act:

    Finally my drawing is done.
